COMMENTS: I live within the 1/4 mile radius to the new proposed transfer station. Where we are now we are impacted by the noise from the station on a daily basis from the trucks delivery and idling to deliver the trash. The smell is unbearable at times. This is not due to the station but the odor comes from the trash trucks. On ozone alert days we are directly affected by the increase in CO emissions therefore with an increase of up to 600 trucks a day on peak trash days it will make the quality of the air a health hazard that directly affects the humans

living in the area. The creek in the back of our homes is a natural spring that feeds into a source of drinking water for the cities. It has already been contaminated by arsenic, lead, and PCL's referenced in the sampling of the water and soil over the past 10 years. The old station was built 40 years ago when the land was farmland. The current TS sits next to water where dogs and children play, nature trails and parks where children play, family dwellings, on a 100 year flood plain, families come to picnic and recreation facilities. We do not believe this location is appropriate in the middle of a community of 500 homes.
